

Logicblocks by Techlignce Robotics Task 11

October 29, 2023

1 Introduction

Welcome to the eleventh task of Logicblocks, by now you must have been familiar with the concept of block based programming. So without any further delay lets dig into the the tasks. Completing all the task in this sheet will reward yourself ₹150/-.

Important : All the **underlined** text are **links**, which might not be visible based on your application, so do not forget to click any underlined text throughout the document and make sure to follow the coding standards given in the file.

2 Reorganize and Resize Everything

The objective of this task is to reorganize and resize components within the application to achieve a more cohesive and structured layout. This includes repositioning components, resizing them for uniformity, and potentially restructuring the application's UI to improve usability and aesthetics.

To begin with the **toolbox** should start from all the way up and extend to all the way until the **bottom**, similarly for the **Blockly workspace**. And then adjust the canvas (this would only go half-way) accordingly. Other items include - **Anchor Button** on the top right and **Floating Action Button** on the bottom right.

2.1 Instructions

The redesigning should be such that the boundaries between each component should be clear. Right now the boundaries are highlighted with a black boundary. You would have to remove this (refer to the **index.css** file) after each component could be properly distinguished without the need of outlines.
